

NITHIN N GEORGE

nithin.g50@gmail.com | Phone: 548-333-5155 | 397 Browndale, Richmond Hill

PROFESSIONAL SUMMARY

Senior Quality & Continuous Improvement Manager with over six years of experience leading cross-functional projects, operational excellence, business transformation, and quality management within manufacturing environments. Proven expertise in Business Analysis, Project Management, Lean Six Sigma, and process optimization, delivering measurable improvements in productivity, quality, cost reduction, and operational performance.

Experienced in translating business requirements into practical solutions through stakeholder collaboration, process analysis, workflow automation, data analytics, and continuous improvement. Skilled in leading projects from planning through implementation, developing business cases, financial analysis, KPI reporting, and driving organizational change using Lean methodologies and Quality Management Systems (ISO 9001).

SKILLS

Business Analysis	Project Management	Operational Excellence	Data & Technology
Business Analysis	Project Management	Lean Six Sigma	Power BI
Requirements Gathering	Project Planning	Operational Excellence	SQL
Process Mapping	Stakeholder Management	Process Improvement	VBA
KPI Development	Risk & Change Management	ISO 9001 / QMS	Advanced Excel
Root Cause Analysis	Cross-functional Leadership	CAPA / PPAP	ERP Systems

EXPERIENCE

07/2024 – Present

Senior Manager – Quality & Continuous Improvement

Irpinia Kitchens
Richmond Hill, Ontario

- Lead cross-functional continuous improvement and business transformation projects from planning through implementation, delivering measurable improvements in productivity, quality, and operational performance.
- Partner with Engineering, Production, Supply Chain, Design, and Executive Leadership to identify business needs, gather requirements, and implement process improvements aligned with strategic objectives.

- Develop and maintain executive Power BI dashboards, KPI reporting, and Management Information Systems (MIS) to support data-driven decision-making.
- Perform business process analysis, process mapping, workflow optimization, and root cause analysis to improve operational efficiency and reduce waste.
- Lead implementation and continuous improvement of ISO 9001 Quality Management Systems, internal audits, CAPA, PPAP, and quality assurance processes.
- Manage commissioning and decommissioning of manufacturing equipment and production lines while minimizing operational disruption.
- Conduct financial analysis, cost modelling, quotation analysis, and cost-saving initiatives to improve profitability and support capital investment decisions.
- Develop VBA automation tools and SQL-based reporting solutions that eliminate manual processes and improve operational visibility.
- Collaborate with Design, Product Engineering, and Manufacturing teams to ensure seamless integration of new product designs into production, with a focus on manufacturability, process capability, and cost efficiency.

06/2023 – 01/2024 **Continuous Improvement Lead - Operations**

RDJ Bakeries
Cambridge, Ontario

- Led cross-functional continuous improvement projects from planning through implementation, collaborating with Operations, Maintenance, Engineering, and Production teams.
- Analyzed manufacturing processes, identified bottlenecks, and implemented Lean initiatives that improved productivity, reduced downtime, and minimized waste.
- Conducted time studies, capacity analysis, workflow analysis, and root cause investigations to support operational improvements.
- Developed process documentation, future-state value stream maps, and standardized operating procedures.
- Built and maintained Power BI dashboards and KPI reporting tools to improve operational visibility and performance tracking.
- Supported facility layout optimization, production planning, and equipment utilization initiatives.

12/2020 – 06/2023 **Continuous Improvement Specialist/Project Manager**

Inject Tech Plastics
Kitchener, Ontario

- Managed multiple customer projects from initiation through completion, ensuring on-schedule, on-budget delivery within project scope.
- Served as the primary customer contact for Magna International and Clek, providing project updates, managing expectations, and ensuring customer satisfaction.
- Developed project schedules, managed resources, monitored risks, and coordinated cross-functional teams throughout the project lifecycle.
- Conducted project planning meetings, monitored critical paths, and implemented risk mitigation strategies to ensure successful project delivery.
- Led continuous improvement initiatives focused on cost reduction, waste elimination, productivity improvement, and process optimization.
- Conducted time studies, OEE analysis, labour analysis, and process mapping to improve operational performance and quotation accuracy.

- Supported financial analysis, cost estimation, and quotation development through production costing and cycle time analysis.
- Developed KPI dashboards and reporting tools to improve project and operational visibility.
- Coached cross-functional teams on Lean Six Sigma methodologies and continuous improvement practices.

EDUCATION AND TRAINING

2020-2021	PG diploma in Information Technology Business Analysis-Operations Conestoga College Kitchener, Ontario
2016-2019	Bachelor's in computer application Mar Augustinos College Ramapuram Kerala, India Affiliated to Mahatma Gandhi University

Key Achievements

Irpinia Kitchens

- **Reduced Direct Labour Costs:** Partnered with senior management to reduce the direct labour-to-revenue ratio from 25% in 2025 to 17% in 2026, with further improvement from 21% in Q1 2026 to 17% in Q2 2026 through Lean manufacturing initiatives, workflow optimization, and labour planning.
- **Launched a New Production Line with 2-Month ROI:** Designed and implemented the Metrofino Line for cost-effective projects, achieving full ROI in just two months while maintaining a labour-to-revenue ratio of 13%.
- **Redesigned Plant Layout for Optimal Flow:** Reengineered the entire production floor to streamline workflow, eliminate bottlenecks, and improve efficiency across departments.
- **Implemented and Strengthened QMS:** Developed and enhanced a Quality Management System aligned with ISO 9001:2015 standards, driving improved product quality, process standardization, and organizational accountability.
- **Automated CNC Program Validation:** Created automated systems for CNC file tracking to prevent missing program errors, ensuring seamless production with reduced downtime.
- **Built Live Dashboards in Power BI:** Designed and deployed real-time Power BI dashboards with live KPIs and departmental targets for improved data visibility and management decision-making.
- **Automated Manual Shop-Floor Tasks:** Developed custom VBA-based tracking software to monitor parts across workstations, reducing manual errors, improving traceability, and saving time.
- **Implemented PPAP Processes:** Rolled out Production Part Approval Process (PPAP) procedures to improve quality validation before mass production begins.

RDJ Bakeries

- **Implemented Pre-Production Approval Process:** Standardized validation and approval steps before production launches, reducing product defects and waste.
- **Improved Packaging Efficiency Through Lean Automation:** Designed and implemented simple in-house automation solutions and Lean improvements that optimized packaging operations, increased productivity, and reduced manual effort without significant capital investment (CAPEX).

- **Developed Internal Audit Support Systems:** Designed and implemented systems to simplify audit preparation, improve compliance, and enhance process traceability.
- **Created Lean Cost Reduction Initiatives:** Identified and eliminated non-value-added activities through Lean methodologies, leading to measurable reductions in operational costs and improved process efficiency.
- **Implemented Change Management Procedures:** Led structured Process Change Request (PCR) initiatives to support process updates with minimal operational disruption.

Inject Tech Plastics

- **Performed OEE Analysis:** Conducted Overall Equipment Effectiveness (OEE) analysis to identify production losses, bottlenecks, and improvement opportunities, increasing equipment utilization and manufacturing efficiency.
- **Reduced Labour and Manufacturing Waste:** Implemented Lean manufacturing initiatives that optimized workflows, reduced labour requirements, and lowered manufacturing waste and scrap percentages.
- **Enhanced Quoting System:** Improved the quotation process by conducting detailed time studies and cycle time analysis, resulting in more accurate labour estimates, production costing, and customer quotations.
- **Inventory Control System Development:** Designed and implemented a system to track and control raw materials and finished goods inventory, improving inventory accuracy and reducing overstock.
- **Cost Analysis System Implementation:** Introduced detailed cost analysis tools that reduced overall supply chain and procurement expenses while improving operational profitability.
- **Delivered Freight Cost Savings:** Supported supply chain optimization initiatives that generated approximately \$100,000 in freight savings for major customers through improved logistics planning and process improvements.

Licenses & Certifications

- Certified Business Analysis Professional (CBAP)
- Six Sigma Black Belt
- Certified Lean Specialist (AIGP Accredited)
- Six Sigma Green Belt
- SAP Integration Suite
- World Education Services (WES) – Verified International Academic Credential Evaluation
